

Genetic Testing

Reimbursement Policy ID: RPC.0098.0100

Recent review date: 09/2024

Next review date: 08/2025

Keystone First reimbursement policies and their resulting edits are based on guidelines from established industry sources, such as the Centers for Medicare and Medicaid Services (CMS), the American Medical Association (AMA), state and federal regulatory agencies, and medical specialty professional societies. Reimbursement policies are intended as a general reference and do not constitute a contract or other guarantee of payment. Keystone First may use reasonable discretion in interpreting and applying its policies to services provided in a particular case and may modify its policies at any time.

In making claim payment determinations, the health plan also uses coding terminology and methodologies based on accepted industry standards, including Current Procedural Terminology (CPT®); the Healthcare Common Procedure Coding System (HCPCS); and the International Classification of Diseases, 10th Revision, Clinical Modification (ICD-10-CM), and other relevant sources. Other factors that may affect payment include medical record documentation, legislative or regulatory mandates, a provider's contract, a member's eligibility in receiving covered services, submission of clean claims, other health plan policies, and other relevant factors. These factors may supplement, modify, or in some cases supersede reimbursement policies.

This reimbursement policy applies to all health care services billed on a CMS-1500 form or its electronic equivalent, or when billed on a UB-04 form or its electronic equivalent.

Policy Overview

This policy addresses reimbursement of prenatal cytogenetics. Genetic testing modalities may be used in the prenatal or early post-natal period to assist in identification of the cause or confirm a diagnosis associated with developmental delay, intellectual disability, dysmorphic features, heart defects, multiple malformations, short stature, stillbirth, neonatal death, or fertility problems. Each of the genetic techniques or methods has its strengths and limitations. Different methods complement each other in trying to identify the genetic variation(s) responsible for a medical condition.

Exceptions

N/A

Reimbursement Guidelines

Claims for prenatal cytogenetic studies (88230-88239, 88245-88269, 88280-88289) may be denied when the only diagnosis on the claim is one of the following:

Genetic Testing 1 of 3

- full-term uncomplicated delivery (ICD-10-CM code O80),
- incidental pregnant state (ICD-10-CM code Z33.1), or
- supervision of normal pregnancy (ICD-10-CM codes Z34-Z34.93).

Claims for prenatal cytogenic testing require a diagnosis to support the need for ordered tests. Documentation in the medical record should support the need for testing.

Definitions

Genetic Testing

A laboratory method that looks for changes in genes, gene expression, or chromosomes in cells or tissue of a person.

Cytogenetics

Testing samples of tissue, blood, amniotic fluid or bone marrow in a laboratory to look for changes in chromosomes, including broken, missing, rearranged, or extra chromosomes.

Modifier KX

Modifier KX is used when billing genetic testing to indicate that the test meets the criteria specified in the policy.
